

WorkQuora Engineering Bible

Volumes 4 to 7 (Draft)

Volume 4 – Design System & UI Architecture

Design philosophy, brand identity, colors, typography, grid, spacing, components, navigation, accessibility, motion, theme engine, responsive rules, design tokens, Figma rules, React Native/Web mapping, component specification sheets.

Volume 5 – Frontend Engineering

React Native + Expo architecture, folder structure, state management, API layer, authentication, localization, offline mode, caching, maps, chat, performance, security, testing, coding standards, Storybook, release strategy and frontend KPIs.

Volume 5.5 – API Contract

REST standards, URL conventions, versioning, request/response schema, authentication, pagination, filtering, WebSocket events, idempotency, caching, OpenAPI/Swagger, API lifecycle, security, SLA and integration guidelines.

Volume 6 – Backend Engineering

Node.js, Express, modular monolith, repositories, services, authentication, RBAC, queue system, cron jobs, Redis, Socket.IO, monitoring, logging, security, event-driven architecture, scaling, disaster recovery.

Volume 7 – Database Engineering

MongoDB Atlas architecture, collection standards, indexing, GeoJSON, aggregation, transactions, backups, monitoring, governance, data lifecycle, scaling, AI feature store, schema catalog roadmap.

Note: This is a condensed draft. The planned final Engineering Bible will expand these volumes into detailed documentation with architecture diagrams, ERDs, sequence diagrams, APIs, schemas, algorithms and implementation guides.
