

WorkQuora Engineering Bible

Volumes 8–11 (Draft Summary)

Volume 8 – Marketplace Algorithms

Defines marketplace philosophy, geo discovery, worker/client matching, proposal ranking, negotiation engine, trust score, fraud detection, recommendation engine, behavioral analytics, pricing intelligence, explainable AI, governance, simulations and algorithm research roadmap.

Volume 9 – Artificial Intelligence Platform

Defines AI assistants, NLP, recommendation models, prediction systems, computer vision, voice AI, AI infrastructure, prompt management, model registry, vector database, MLOps, responsible AI and autonomous agents.

Volume 10 – Infrastructure & DevOps

Defines cloud architecture, environments, CI/CD, Docker, Kubernetes roadmap, observability, SRE, infrastructure automation, cloud cost optimization, security infrastructure, disaster recovery and platform engineering.

Volume 11 – Security Engineering & Trust Platform

Defines Zero Trust architecture, IAM, authentication, authorization, API security, encryption, fraud prevention, DevSecOps, SOC, compliance, privacy engineering, AI security, incident response and cyber defense roadmap.

Note: This PDF is a condensed draft generated from the Engineering Bible planning sessions. The final edition will include detailed architecture diagrams, ER diagrams, algorithms, flowcharts, implementation guides, ADRs, security models, AI models, cloud diagrams and production-ready documentation.
